

RAAH Safety Pallet Lifting Bars

RAAH Safety Pallet Lifting Bars are safe and easy pallet lifters and most economical.

They have WLL of 2 Tonnes per pair. Designed to use via multi leg slings - chains assembly. These bars fit precisely into the pallets & hook design to secure them and keep the bars apart.

The Bars need to be placed at opposite ends and are held secure with the L-Shaped Hooks that fixes at end of pallets. This ensures the bars are spread apart.

These bars are suitable for use on all Standard Size Wooden Pallets

Pallets used to lift using these pallet bars, must have weight evenly distributed on both bars. It is important that a load which is too narrow, not be used to lift with the pallet bars.

FEATURES :

- WLL 2 Tons per pair
- End hook to keep bars separated and secure. Bars must be atleast 900mm apart
- Can be used on variety of standard size pallets
- Weight 24 kgs per pair
- Dimensions 1250mm length
