Additional information:

Cleverly designed such that the bottom bars can be stored on top of the cage. The cage is bottom open. To use 4 legged wire rope or chain assembly. Hook the slings at the 4 appointed Dee on top part of Pallet Cage. Raise the cage and place it over the palletised cargo that needs to be carried. Once cage is fully lowered and flat on ground, slide the two bottom lifting bars and lock it in place. You can now hoist the cage up, and the pallet will be lifting resting on the bottom two lifting bars.

This is an easy - fast - safe and effective pallet lifting cage design.
